

Design Audit — https://example.com/

Analyzed: 2026-05-17T17:36:05.890Z • Score: 69

Executive summary

Audit completed on https://example.com/. Overall score 69/100. Key opportunities center on conversion optimization review, interaction design review, consistency and component-system maturity.

Color palette

Primary text
rgb(51, 68, 136)

Secondary text
rgb(51, 68, 136)

Primary surface
rgb(255, 255, 255)

Secondary surface
rgb(244, 244, 245)

Accent / CTA
rgb(51, 68, 136)

Sections

Brand and Design Identity Evaluation

Visual identity appears focused across typography and component styling.

Visual Hierarchy Analysis

Hierarchy strength is evaluated from heading structure density, card segmentation, and above-the-fold clarity.

Typography Analysis

Typography scale shows 2 frequent font-size steps in desktop mode.

Color Psychology Analysis

Detected 1 recurring text color values; palette cohesion influences trust and conversion confidence.

Layout and Grid Analysis

Layout structure uses 0 grid and 0 flex containers in sampled nodes.

Accessibility Review

Accessibility quality is scored using image alt coverage and interactive control labeling checks.

Mobile Responsiveness Review

Responsiveness is measured by mobile viewport rendering behavior and overflow indicators.

Interaction Design Review

Detected 0 interactive controls and 0 animated nodes.

Conversion Optimization Review

Conversion language indicators found: 0; trust indicators found: 0.

UX Friction Analysis

Friction score combines accessibility defects, overflow behavior, and interaction dead-ends.

Consistency and Component-System Maturity

Component maturity is inferred from repeated card/button patterns and cross-section visual reuse.

Performance Perception and Modernity Alignment

Perceived performance is influenced by motion load, content density, and structural modern UI patterns.

Competitive-Quality Perception

Competitive quality is inferred from modern layout patterns, hierarchy clarity, and conversion confidence.
